

Digit Strategy Units – Resource Updates

In response to the new Programme of Study for ICT (2008 onwards) we have reviewed our Digit Strategy resources for KS3 and where necessary updated any teacher and pupil files. We are satisfied that the content of our resources give appropriate rigour and pace whilst covering the learning objectives in an ordered fashion. Please read the accompanying file which provides an overview of this update.

Only files & HTML pages that have changes have been included within this update and these can be found within the folder structure that replicate your original CD. If for any reason you have changed file names or paths to any original files you will need to replace & rename these individually to match.

PLEASE READ THE FOLLOWING CAREFULLY

Do not destroy your original CD that came with your resource package as this can always be used to restore the majority of the unit should you so wish. The updated resources can be found within a folder structure that replicates your original, these files need to be copied to their new positions where you have installed the resource to overwrite the original file.

We have not automated this procedure to enable you to make decisions as to how many or which new materials to use.

IMPORTANT - DO NOT COPY THE FOLDERS IN PLACE OF YOUR EXISTING ONES BUT COPY INDIVIDUAL FILES

To replace the files:

- Delete the old files and then copy the new ones over
- or
- Drag the new files in place and overwrite the existing ones

Better method

- If you wish to keep the existing resources then rename these first
e.g. objectives.htm > *objectivesold.htm*
- or
- Create a new folder e.g. oldresources and move the old files into it before copying the new ones.
